

Social Network Analysis Platform

Project Overview

YouAnalyze is a web-based analytics platform, developed by a five member team, that uses Social Network Analysis and YouTube channel data, designed to support content creators and business users in understanding social media trends, analysing their engagement, and making data-driven decisions. By leveraging social network analysis, predictive modelling, and automated data retrieval from YouTube channels, the platform provides users with meaningful insights into audience behaviour, content performance, and potential growth opportunities.

My Role In the Team

Lead Tester

- Prepared and executed test cases to validate system functionality.
- Identified, documented, and reported defects throughout the testing phases.
- Contributed to ensuring the overall quality, reliability, and readiness of the system before deployment.

Lead Documentation Manager

- Managed and maintained project documentation, including system requirements, design diagrams, and sprint reports.
- Ensured all documentation was clear, consistent, and kept up to date throughout the project lifecycle.
- Coordinated documentation efforts among team members to maintain project quality and organization.

Front-End Developer

- Contributed to the design and implementation of the user interface using HTML, CSS, and JavaScript.
- Participated in the project from the planning stage by researching the project scope and defining system functionalities.

- Collaborated with team members during system design, implementation, and testing to deliver a user-friendly and functional platform.

Project Target Audience

Content Creators

Independent creators or influencers who wish to understand their YouTube channel performance, analyse audience interactions, visualise engagement patterns through network graphs, and access predictive insights to optimise their content strategy.

Business users

Businesses, marketing teams, agencies, and brand managers who require deeper multi-channel analytics, industry-wide network insights, influencer centrality metrics, and campaign reach forecasting to support marketing decisions and strategic planning.

Key Features

- Supports multiple user roles, including Unregistered Users, Content Creators, Business Users, and System Administrators, each with role-specific functionalities.
- Enables users to securely register, log in, manage profiles, subscribe to plans, and contact customer support.
- Integrates with the YouTube Data API to analyze channel performance, generate social network graphs, provide audience insights, and predict future channel growth.
- Allows business users to analyze multiple YouTube channels, generate performance reports, and identify marketing opportunities through data-driven insights.
- Provides an administrative dashboard for managing user accounts, subscription plans, enquiries, and enforcing platform security through role-based access control.
- Includes user feedback, reviews, and support management features to improve platform usability and overall user experience.

Technologies & Tools

- **Frontend:** HTML, CSS, JavaScript, TypeScript
- **Backend:** Python
- **Frameworks & Libraries:** React, Vite, Flask
- **Development Tools:** Visual Studio Code
- **Database:** MySQL
- **Version Control:** Git & GitHub
- **Project Management:** Taiga
- **Methodology:** Agile Scrum
- **System Design:** Use Case Diagrams, Sequence Diagrams, BCE Diagrams
